DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to a method for treating a semen specimen at a specified temperature, classified in class 435, subclass 2, for example.
- II. Claims 3-10, drawn to a method for treating sperm cells by separating semen, classified in class 435, subclass 332, for example.
- III. Claims 11-20, drawn to a method for increasing the probability of producing offspring of a desired sex, classified in class 435, subclass 375, for example.
- IV. Claims 21-27, 32-44, 49-53, 58-59 drawn to a method for separating a selected population of cells from, semen samples, classified in class 435, subclass 377, for example.
- V. Claims 28-31, 45-48, 54-57 drawn to a method of insemination, classified in class 600, subclass 35, for example.
- VI. Claims 60-95, drawn to methods of treating sperm sample to increase the probability of producing a desired offspring, classified in class 435, subclass 325, for example.

The inventions of groups I-VI are directed to different inventions, which are not connected in design, operation, and/or effect. These **methods** are independent since they are not disclosed as capable of use together, they have different modes of

Art Unit: 1651

operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone. For example, the methods require different time periods of contact, different components, some require fertilization while others do not, and specified cell numbers.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tiffany M. Gough whose telephone number is 571-272-0697. The examiner can normally be reached on M-F 8-5 pm.
